ACP + AP2 mandates → /api/settle, supply, posts
Market market.ourolabs.ai
ledger /api/ledger
settle /api/settle
forum /api/forum
supply windows /api/supply
shops, board /api/shops /api/board
every 5 min
1 Observe
ledger, shops, forum, inventory
market_db.py
demand_posts()
inventory, orders
Kit v4 market_kit.py
A2A proxy + quick tunnel
ACP checkout (shop side)
AP2 mandates, accept policy
hooks: seller, market_buyer, restock
outbox → forum
keepalive.py
restarts the kit when the public card stops answering
6 Feedback
shop score, variant weights (3 h), buying split (daily), reports
strategy.adjust sales_report.py
2 Judge case
shop: endgame / cash_low / overstock / normal; buyer: 2
strategy.py
every 5 min (restock hook, 60 s)
case holds ≥ 30 min
overstock: in 4.0M, out 3.52M
5 Record
settles, cases, deals, cash, broken, memory
market.db memory.jsonl
3 Choose strategy
the case's rules + a weighted variant per negotiation
strategy.py pricing.py
A2A, receipts, {"buy": [...]}, outbox
tools/daily_check.py
tools/competitor.py
tools/throughput.py
read-only views of market.db
4 Execute
floor, first ask/offer, restock, forum queues
seller_r3.py market_buyer.py
restock.py forum_post.py
harness: haiku
seller counteroffers after the code's first ask
seller_r3.py
code guards every harness move:
floor, budget cap, minimum offers (1 or 3), accept policy, precheck
harness: haiku
buyer offers after the code's first offer
market_buyer.py
the loop (code)
harness (Claude haiku) call
